# Simplify your nursery or garden centre's operations

ACCEO OGC's module for nurseries and garden centres is adapted to your specific business reality, such as the seasonal nature of your store's inventory. The many included features allow you to ensure operational efficiency and offer superior customer service, particularly during your busiest months of the year.

## Reduce waiting lines

- Perform searches quickly and access your products' complete description (including Latin and common names) without changing screens
- Prepare sales orders directly from within your store or from the garden centre using wireless technology and reduce waiting lines

## Adapt your operations for peak periods

- Add extra seasonal cash registers effortlessly and establish permission settings for seasonal employees in no time
- Train your temporary staff swiftly thanks to the user-friendly graphical point of sale and its mobile app for tablets

## Manage your products more easily

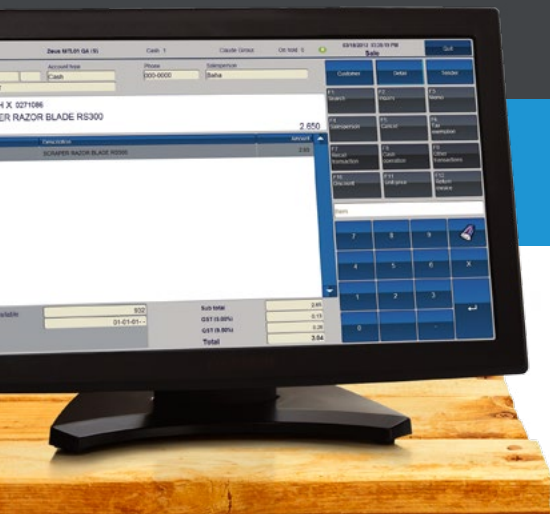

- Work with product fact sheets adapted to your needs, which include information on:
  - Exposure type
  - Soil type
  - Fertilizer code
  - Flowering code
  - Trimming code
  - Guarantee code
  - Hardiness zone
  - Latin name and size
- Manage your inventory, product sheets and prices quickly with our Excel-based information exchange module

## Customize your labels' printing templates

- Save time by using barcodes
- Select or create several label formats to suit your needs
- Use our ready-made templates or ACCEO OGC-compatible formats such as Labelview and Nicelabel

## Benefit from simplified pricing management

- Set prices based on quantities or allow different products to be grouped to offer a better price
- Program your prices to offer special discounts (e.g., for landscape architects or for your end-of-season clearances)
