

DataViews

A dashboard module to view the data you need within a few clicks

Access to your Sales and Inventory data to make informed decisions

Single, synthesized views equivalent to multiple reports

Tracking of your KPIs and objectives to enable quick action

Comparatives for different periods arranged by store, location, department, client, sales person

Trend displays to assist with strategic planning

Data mining for detailed analysis

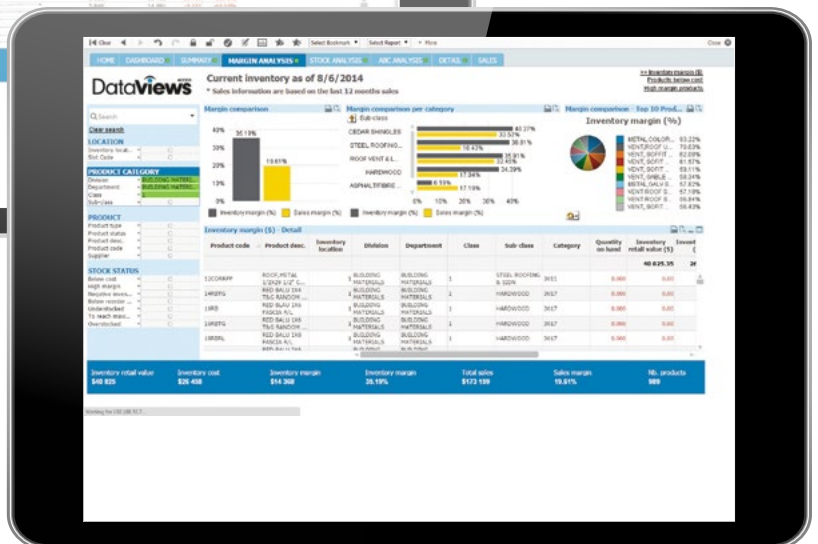

Together to optimize your performance

DataViews

The DataViews dashboard module: so many possibilities!

- Target your objectives and monitor your KPIs easily
- Visualize an overview of your operations and compare your data against information for the same period the previous year
- Spot trends in your business easily
- Choose any store, category, or client group and mine your data in detail to clarify specific situations
- Export data to Excel or other tools for additional analysis in a single click
- Create bookmarks to save your favourite views
- Exclude certain data as necessary

Get a full picture of your sales and inventory in a single glance

Analyse your sales data

- Track the progress of your sales team on total sales, percentage relative to the overall team, and margin dollars based on yearly, quarterly, monthly, weekly or daily numbers
- Compare a specific day of the week to previous years - allowing for promotional planning and staff scheduling - among others
- Get a quick year-over-year comparison on sales volumes, dollars and margins
- Identify and rank customers according to sales volume and margins - based on historical and YTD numbers
- See your average invoice transaction amount, the margin on these sales, and how they compare to other periods
- Report on sales by division, department, and class and see a year-over-year comparison quickly

Optimize your inventory management

- View stock evaluation, cost, margins, and quantities for each product instantly
- Obtain a quick overview of inventory turnover ratio and gross profit ratio
- Do away with inventory shortages and overages with detailed information provided by the DataViews dashboard module
- Create ABC analysis scenarios and analyze graphs to optimize your inventory
- Analyze product categories with higher percentages or with stock showing negative inventory
- Assess the state of inventory and the value of products over- or under-stocked to maximize your inventory
- Reduce idle inventory through regular monitoring of the value of unsold products over a specific period
- Apply filters to display product location, category, and type

Together to optimize your performance

DataViews

A dashboard module
that enables you to:

Get a quick overview of your sales and inventory data

Drill down to specific products, departments, customers,
sales person, current vs. previous periods

And more!

The DataViews dashboard module has been a nice surprise, not only for its user-friendly graphical interface, but also for the detailed level of analysis of the data presented. With DataViews, I am able to quickly identify the less profitable products and hours of operation. As a result, I can plan promotions on targeted products for specific days and increase our business performance.

– Amélie Belisle, Quincaillerie St-Augustin (1985) Inc.

Requirements

- OGC X1
- Installation on high-performance Windows workstations
- Scheduling of data extraction from your OGC management solution
